Ducommun Switch Matrices Questionnaire

**SWITCH MATRICES OVERVIEW**

Ducommun RF Products has been actively working with our individual customers to develop unique testing solutions with our Switch Matrices and coaxial switches. Ducommun RF Products has over twenty five years experience with the design and manufacturing of switch matrix systems. Combining together our technical knowledge of both coaxial switches and switching systems, we have been able to assist our customers with a variety of solution that fit their unique requirements.

**SWITCH MATRICES SPECIFICATIONS**

- **What mode of switching is preferred?**
  - [ ] Electro-Mechanical
  - [ ] Solid State
  - [ ] Either

- **Matrix Switch Construction**
  - [ ] Switches on Inputs & Outputs (Blocking)
  - [ ] Power Dividers on Inputs & Switches on Outputs (Non-Blocking)
  - [ ] Power Dividers on Inputs & Outputs w/1P1T Switches In Between (Super Non-Blocking Type #1)
  - [ ] Power Dividers on Inputs & Outputs w/ Prog. Attenuators In Between (Super Non-Blocking Type #2)
  - [ ] Other

- **Number of Inputs**

- **Number of Outputs**

- **Switching Speed**

- **Type of RF Connectors**
  - [ ] Input Connector Type
  - [ ] Output Connector Type

- **Frequency Range (specify MHz or GHz)**

- **Input Power (specify Watts or d8m)**

- **Remote Control Type (select all applicable)**
  - [ ] RS-232
  - [ ] GPIB
  - [ ] Ethernet
  - [ ] USB
  - [ ] Other (specify)

- **Front Panel Control**
  - [ ] Yes
  - [ ] No

- **Package Type**
  - [ ] 19" Rack
  - [ ] Bench Mount
  - [ ] Other

- **Front Panel Controls Required**
  - [ ] Yes
  - [ ] No

- **Additional Comments**
**BLOCKING MATRIX**

- Can connect any input to any output, but due to the limited internal lines (internal lines < Input/Output ports), a limited number of paths can be connected simultaneously. In this example only 2 Inputs at the time can be routed to Outputs.

**NON BLOCKING FANOUT MATRIX**

- Any input can be connected to one or multiple Outputs simultaneously.

**NON BLOCKING CROSS BAR**

- Any input can be connected to any Output at the time, but the number of paths can not exceed the lower number of inputs or outputs. (In this example only 3 paths at the time).

(internal paths = lower number of Inputs or Outputs)
